Welcome to the world of CompuServe Games!

Sometime ago in the dark ages of computing (1973) two gentlemen by the names of Crowther and Woods decided to write a game on their University computer. The computer mainframe was a Digital Equipment Corporation PDP-10, similar to ones that CompuServe still uses today. The game was Original Adventure and instantly became the classic standard of computer gaming. As Original Adventure set the standard in 1973, CompuServe hopes to set the gaming standards of today.

CompuServe still offers classics such as Original Adventure, New Adventure, House of Banshi and many other traditional games. And we are proud to offer new standards for today's game enthusiasts. Multi-player games such as MegaWars, Space War and Casino Blackjack offer new dimensions in gaming today. Players need not be in the same room or even in the same town to play against or interact with another player. For added spice, try MegaWars II, with color graphics to enhance the game play.

Many of the games in this guide are documented in their entirety. Due to space limitations in this guide, a few of the more sophisticated games require a separate manual for effective game play. Details for ordering separate manuals are given where appropriate.

CompuServe continually adds new games for our customers to play, so keep an eye on WHAT'S NEW and UPDATE for new game releases. CompuServe is pleased to present this guide to our games for your enjoyment. We hope you have as much fun playing these games as our staff has had in designing and offering them to you.

**Players (min/max) :** 1/1  
**Special Requirements :** None  
**Minimum Screen Width :** 32

The object is to get 5 playing pieces in a row, across, down or diagonally. You may play X or O (X always moves first).

To move, add the number to the left to the number above where you want to be (for example, 49 means the position on row 40 under column 9).

The board is redrawn by the computer after each move. You can suppress this for one turn by typing a minus sign as the first character of your move (for example, -53).

The computer learns from its defeats, making it harder for you to win each new game. If you aren't in for challenges, you can respond 'NO' when it asks if it may learn. Also, the computer will create a file, if you let it, so that it may keep its higher skill level each time you log on and play a new game.

In ancient times some say that the kings of Myanople played Folie des Rois ('the Madness of Kings') to while away the long winter's dark and dreary day. It is an engaging game, involving no more than sixth grade math, but it can be very difficult.

The computer thinks of a rule that fits three numbers which it shows to you. You then try to figure out the rule by typing in three numbers (separated by spaces or commas). The computer will tell you whether or not your numbers also fit the rule. If you think you know the rule, you tell the computer and it will give you a short quiz.

There are five levels to Folie des Rois:

- 0 Beginner's warm-up
- 1 Straightforward
- 2 Drives you mad
- 3 Drives you madder
- 4 La Plus Grande Folie!

Play this game against the computer by placing a marker onto the board so that one or more of the computer's markers are between your newly played marker and one of your markers already on the board; the computer's markers then are captured and become your markers. The object is to have the most markers at the end of the game.

You can capture markers in more than one direction at once (there can be no empty squares between your markers and the ones you are capturing).

To move, simply type the letter-number pair where your new marker is to be placed (for example, H2 or E6). If you have no legal move, you automatically pass.

You can play this game alone or with a friend. The computer keeps track of each score, and praises the winner of each game.
